1 Keep the source

保留來源

A usable book begins with a source you can reopen.

一本可靠的書始於可以重新打開的來源。

p-001 • [source/book.json#/chapters/0/paragraphs/0](#)

This specimen keeps a stable ID, language, status, and source location beside every reviewed paragraph.

這份樣本在每個已審閱段落旁保留穩定編號、語言、狀態與來源位置。

p-002 • [source/book.json#/chapters/0/paragraphs/1](#)

2 Design for paper and reflow

同時為紙頁與流式閱讀設計

Print and reflowable books solve different reading problems; a fixed page protects composition, while EPUB lets the reader change type size.

印刷書與流式電子書解決不同的閱讀問題；固定頁面保護版式，EPUB 則讓讀者調整字級。

p-003 • [source/book.json#/chapters/1/paragraphs/0](#)

The structure stays the same in both outputs: title, chapter, paragraph, source ID, and review state.

兩種輸出保留同一結構：書名、章節、段落、來源編號與審閱狀態。

p-004 • source/book.json#/chapters/1/paragraphs/1

3 Finish with checks

以檢查完成製作

A build is not finished when the files merely open. The PDF needs page, font, and text checks; the EPUB needs package, navigation, and link checks.

檔案能打開並不代表製作完成。PDF 需要頁面、字型與文字檢查；EPUB 需要封裝、導覽與連結檢查。

p-005 • source/book.json#/chapters/2/paragraphs/0

The specimen ends with a boundary: translation, editing, cover design, platform upload, printing, and the complete book require a separate scope.

樣本最後劃清界線：翻譯、編輯、封面設計、平台上傳、印刷與完整書稿都需要另行約定。

p-006 • source/book.json#/chapters/2/paragraphs/1

Specimen boundary

This packet demonstrates a short, project-owned source-to-PDF/EPUB workflow. It is not customer work, a translation benchmark, a marketplace approval, or proof of complete-book delivery. Translation, substantive editing, cover commissions, ISBNs, platform uploads, printing, and a complete manuscript require a separate scope.
